

ABUBAKAR GHAFOR

Python Backend Developer | AI / LLM & RAG Integration

Rawalpindi, Pakistan • abubakargcx@gmail.com • +92 320 3814829
github.com/abubakargcx-dev • linkedin.com/in/abubakargcx • abubakargcx.vercel.app

PROFESSIONAL SUMMARY

Software Engineering student building a focused specialization in Python backend development (Django, Django REST Framework, PostgreSQL, Docker) with a distinct edge in applied AI: integrating large language model (LLM) APIs and Retrieval-Augmented Generation (RAG) pipelines into production-style backend systems. Hands-on experience shipping a deployed SaaS tool using Flask and third-party APIs, plus multiple object-oriented desktop applications in Java. Seeking a junior backend / Python developer role or internship to apply and grow these skills in a real engineering team.

TECHNICAL SKILLS

Languages: Python, Java, C++

Backend & APIs: Flask, Django, Django REST Framework (DRF), RESTful API design, JWT Authentication

Databases: PostgreSQL, SQLite

AI / LLM Integration: Groq API, LLM API integration, Retrieval-Augmented Generation (RAG), pgvector

Tools & DevOps: Git, GitHub, Docker, Postman, Linux command line

Core CS: Object-Oriented Programming (OOP), Data Structures, Software Development Life Cycle (SDLC)

PROJECTS

Backend API Starter

Python • Django • Django REST Framework • PostgreSQL • Docker • JWT

- A production-ready REST API template built with Django REST Framework, authentication, PostgreSQL, and Docker.
- Problem: starting a new backend project usually means re-solving the same setup issues — auth, structure, environment configuration.
- Solution: a reusable, opinionated starting point with authentication, structured settings, and containerized development already in place.

AI Document Assistant

Python • Django • PostgreSQL • REST API

- An AI-powered backend capable of processing documents, semantic search, and conversational retrieval using modern RAG techniques.
- A backend service that indexes documents and answers questions grounded in their actual content.

Task Management Platform

Python • Django • Django REST Framework • PostgreSQL

- A scalable project management backend supporting authentication, permissions, notifications, and REST APIs.

CURRENT LEARNING & IN-PROGRESS WORK

- Completing a structured 6-month backend roadmap: Python fundamentals → Django/DRF → PostgreSQL → JWT auth → Docker → deployment → LLM API integration → RAG with pgvector.
- Working through the Meta Back-End Developer Professional Certificate (Coursera) and CS50P (Harvard, edX) for rigorous Python fundamentals.
- Building a portfolio project that combines a Django REST Framework backend with a RAG-based AI feature as a practical demonstration of applied LLM integration.

EDUCATION

BS Software Engineering — National University of Modern Languages (NUML), Rawalpindi

Currently enrolled, 3rd Semester

ADDITIONAL

- Comfortable working in a fast-paced, self-directed learning environment; maintains a daily dedicated deep-work schedule.
- Available for part-time / flexible-hour roles around university schedule.
